## Application and improvement of Clog 2.0

*Thursday, April 18, 2024 1:50 PM (10 minutes)*

Clog 2.0 (Compact Electronic Logbook System) is a web-based logbook system developed using JavaScript programming language for both frontend and backend in order to simplify the implementation and improve the development efficiency. It was published on September 2022 and applied to the accelerator system of HEPS (High Energy Photon Source) project on August 2023. According to the requirement of HEPS project, some improvements have been made. This talk will cover the application and improvement of Clog 2.0.
