1.3 GHz single-cell cavity fabrication

As an activity for the GLOBAL COLLABORATION for ITN,

KEK(JPN) and Korea Univ.(KOR) are proceeding the collaboration for the fabrication of 1.3 GHz 9-cell cavity.

KAT Co., Ltd. has participated in the collaboration for manufacturing two 1.3 GHz single-cell cavities with the different grain size Nb materials (FG/MG).

\* FG: fine grain size

\* MG: medium grain size

- Supervision of cavity fabrication

- Providing Nb and NbTi raw materials

## Kiswire, Global Specialty Wire Company

Founded in 1945, Kiswire manufactures specialty steel wire products for a diverse range of industries including automotive, bridge, energy, construction and electronics. Kiswire exports to customer in over 80 countries.

Establishment	1945	Headquarters	Busan,Korea
Export countries	80	Annual total production capacity	1,200,000t
Worldwide employees	6,000	Annual sales	2.1 B USD (FY 2023)

KAT is a global leading superconducting wire company, located at Daejeon/South Korea.

Established in 2004 as a wholly owned subsidiary of Kiswire, KAT specializes in high-performance superconducting wires, including Nb<sub>3</sub>Sn, NbTi, and MgB<sub>2</sub>. These wires are utilized in fusion reactors such as K-STAR, ITER and DTT project. KAT has been also developing the High-Jc Nb<sub>3</sub>Sn wire for the FCC project in collaboration with CERN.

Additionally, from 2018 to 2022, KAT supplied the cryomodule prototypes and cryostats to RAON and RIKEN, respectively. From 2021 to 2023, KAT successfully fabricated and tested the 1.5 GHz 3<sup>rd</sup> harmonic superconducting cavity for new Synchrotron light source.

### Introduction of KAT

### About KAT

Established in 2004, KAT is a global leading superconducting wire company and wholly owned subsidiary of Kiswire.

### **Superconducting / Cryogenic Applications**

Start R&D of SC MRI magnet 2010

Foundation of KAT

2004

2006

Supply Nb<sub>3</sub>Sn of 2 tons for KSTAR (PF Coil)

Start R&D of Nb<sub>3</sub>Sn superconducting wire (Kiswire R&D Center)

1998

Supply 1.5T MRI magnet to TCL, China (KAT NbTi

wire applied)

2015

2009

Supply Nb<sub>3</sub>Sn of

137 tons for ITER

(TF, CS Coils,

2009-2016)

2014 ~ 2021

Start R&D project of NbTi and MgB2 wires funded by Korean Government

cryomodule Supply HWR B in RIKEN cryomodule 2019 prototype

For RAON 2018

> 2017 ~ Now

R&D contract with CERN for High Jc Nb<sub>3</sub>Sn wire

R&D for 1.5 GHz 3<sup>rd</sup> Harmonic cavity

2021~2023

cryostats for

2019 ~ 2022

Supply Nb<sub>3</sub>Sn of 55 tons for DTT TF coil

R&D for 1.3 GHz Single-cell cavity

2024

2023

Start SUCCEX project in KOREA. 1.4 tons High Jc 5.9 tons Nb<sub>3</sub>Sn

**Superconducting** Wires

## **Introduction of KAT**Superconducting Cryomodule

#### RAON HWR B Cryomodule Prototype (2018, IBS/Korea)

- Cavity, coupler, tuner were supplied by IRIS
- Cryostat design and manufacturing by KAT
- Cryomodule assembly including clean room work by KAT

## Introduction of KAT Superconducting Cryomodule

#### RIKEN QWR Cryomodule Cryostat (2019, MHI-MS)

(vacuum vessels, thermal shields, and other parts)

- KAT has manufactured the vacuum vessels and thermal shields and the helium leak test and pressure tests according to the Japanese Industrial standard.
- Those cryostat parts have been supplied to MHI-MS and assembled as the cryomodule.
- The cool-down process has been conducted in 2020 successfully.

## Introduction of KAT Superconducting Cryomodule

#### **RAON SSR2 Cryomodule R&D Prototype Assembly**

(2022, RAON/Korea, Collaboration with IHEP/China)

- The cryomodule assembly work has been done by collaboration of IHEP and KAT in RAON.
- In 2024, KAT plans to participate in the SSR2 cryomodule mass production prototype in collaboration with IHEP.

## Introduction of KAT Superconducting Cavity

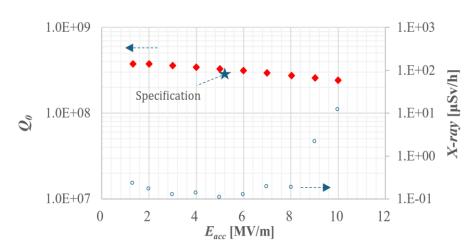

## 1.5 GHz 3<sup>rd</sup> Harmonic Cavity Prototype for the Synchrotron Light Source

(2023, Collaboration with Korea Univ.)

- The cavities have been fabricated by KAT with the technical advices by Korea University.
- The vertical test of the cavity has been conducted utilizing the infrastructure of SARI-SSRF/China, and the test results met the targeted specifications.

Vertical test results of the 1.5 GHz 2-cell 3rd harmonic cavity at 4 K

### **Introduction of KAT**

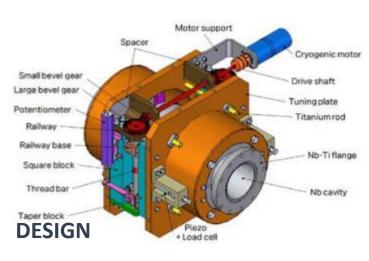

### **Frequency Tuner for Superconducting Cavity**

#### Frequency Tuner for 1.5 GHz 3<sup>rd</sup> Harmonic Cavity Prototype

(2023, Collaboration with Korea Univ.)

- The tuner has been designed, manufactured, and tested by KAT with the advices by Korea Univ.
- The performance test of the tuner has been conducted at the liquid nitrogen temperature successfully.

Parameters	Unit	Required @ 77K	Measured @ 77 K
Tuning range	kHz	≥ 500	532
Tuning sensitivity	Hz/step	≤ 3.0	1.0

## 2024 26° International Conference on Accelerators and Beam Utilizations

### Objectives and Schedule

- Objectives
  - : Verification of cavity fabrication process in Korea by utilizing different Nb raw materials
    - Fabrication two 1.3 GHz single-cell cavities (1 FG cavity/1 MG cavity) in Korea
    - Surface treatment and vertical test of cavities by KEK in Japan
- Schedule
  - The 1.3 GHz single-cell cavities have been shipped to Japan successfully.
  - The surface treatments and vertical test of cavities will be conducted by KEK.

Cavity fabrication infrastructure in KAT

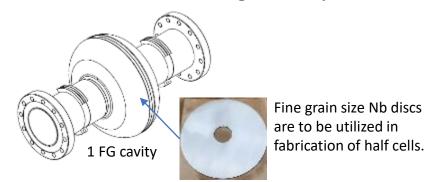

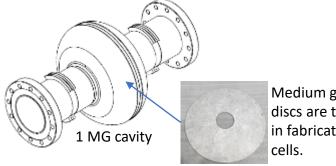

2024
26° International Conference on Accelerators and Beam Utilizations

Cavity Design and Raw Materials

- Cavity Design
  - The typical 1.3 GHz single-cell cavity
  - Two cavities with same geometry, but different grain size Nb materials on the cell

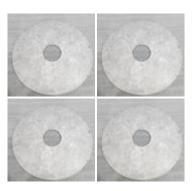

Medium grain size Nb discs are to be utilized in fabrication of half cells

#### Raw Materials

Fine grain size Nb discs (4 pcs)

Medium grain size Nb discs (4 pcs)

Nb tubes (4 pcs, fine grain)

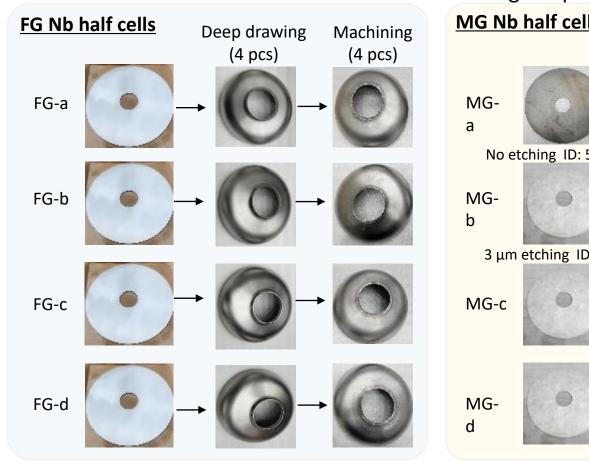

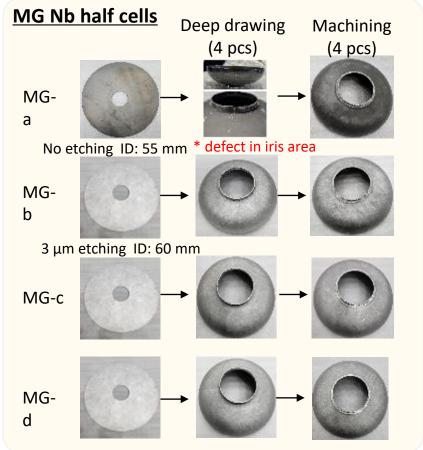

Nb billets (2 pcs, low RRR)

## 26° International Conference on Accelerators and Beam Utilizations

#### **Parts Fabrication**

- Half cell fabrication
  - Totally 8 half cells have been fabricated.
  - One of MG half cell had a defect at iris area during deep drawing process.

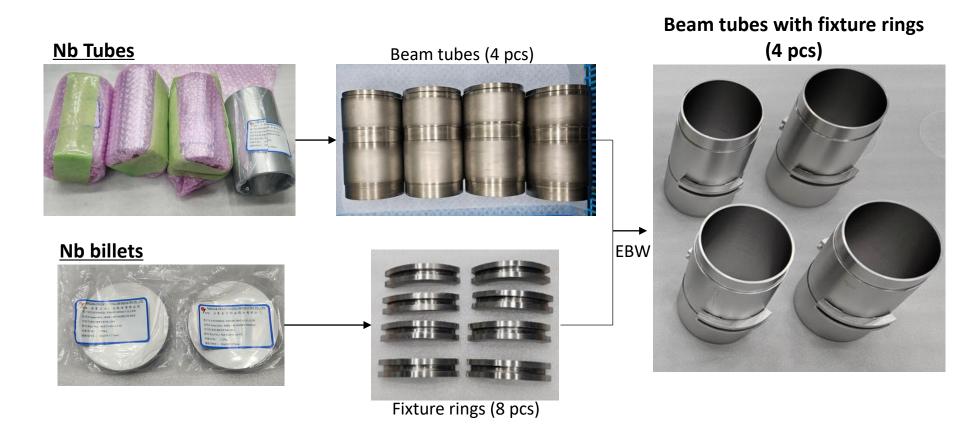

X The deep drawing of half cells has been done by collaboration with KIMS (Korea Institute of Materials Science)

26° International Conference on Accelerators and Beam Utilizations

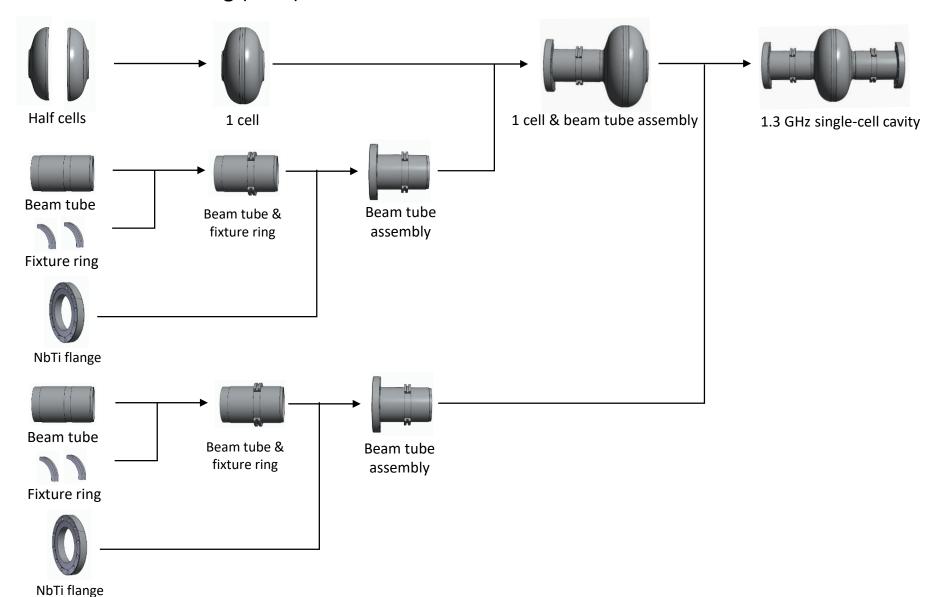

**Parts Fabrication** 

- Other parts fabrication
  - Tubes and fixture rings have been fabricated.

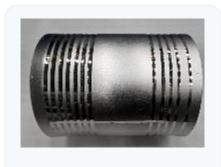

Electron Beam Welding (EBW) Plan

Electron Beam Welding (EBW)

- Before starting EBW for two 1.3 GHz single-cell cavities (1 FG cavity and 1 MG cavity) with provided Nb materials by KEK, we have practiced the EBW process to check the EBW quality.
- After checking the EBW conditions, the EBW process were performed for the two 1.3 GHz single-cell cavities (1 FG cavity and 1 MG cavity)

Equator / Iris EBW practices

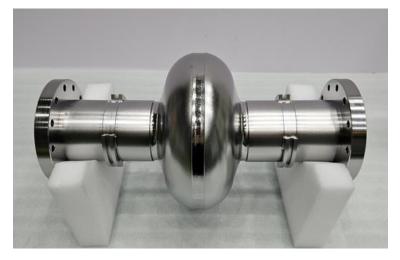

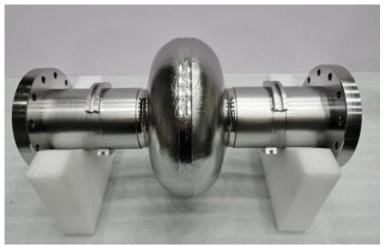

26<sup>th</sup>

**Fabrication Status Summary** 

1.3 GHz FG single-cell cavity

1.3 GHz MG single-cell cavity

- Two cavities have been assembled by the EBW process. (14-Aug-2024)
- Resonant frequency check, helium leak test are conducted in 19<sup>th</sup> Aug for two cavities.

	FG single-cell cavity	MG single-cell cavity
Resonant Freq.	1.298588 [GHz]	1.299351 [GHz]
Leak Rate	< 0.5E-12 [mbar-L/sec]	< 0.5E-12 [mbar-L/sec]

X Two mock-up cavities are fabricated in advance to exercise the fabrication process.

Frequency and Leak Rate

Configuration of Resonant Frequency Measurement

Resonant frequency measurement jig

Device & Environments in measurement					
Device	Network analyzer	ZNL20 (ROHDE&SCHWARZ)			
	Input & Pick up coupler	RF-JKM N female connector			
		*Antenna : Copper, Length 50 mm			
Environments	Temperature	25 °C			
	Humidity	60~62 %			

26° International Conference on Accelerators and Beam Utilizations

Frequency and Leak Rate

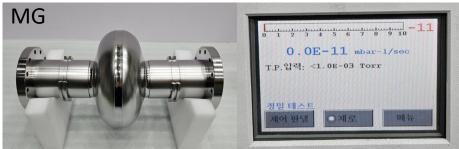

Configuration of Helium Leak Test

Device & Environments						
Detector	Agilent, He Leak Detector					
Temperature	25 °C					
Humidity	60~62 %					

Helium Leak Test Results: No leak found in both cavities

### Packing

1) Flanges of cavity were covered with Al flange

Cavities were packed with clean shielding bag.

③ Cavities were packed with plastic carrier.

4 Plastic carriers were packed with wooden box

(5) The wooden box was sealed by the plastic cover and shipped to KEK/Japan

### Transportation

- The cavities were transported from Korea Univ. to Japan.
- We are waiting for the cavities to arrive at KEK.

- KAT(Departure : 03-Sep)  $\rightarrow$  Korea Univ.(Arrive : 03-Sep)

- Korea Univ.(Departure : 12-Sep) → KEK(Arrive : 02-Oct)

 KEK invited KU and KAT people for participating the inspection, surface treatment, and vertical test of two cavities. (Mid of Dec 2024)

### **Summary & Future Work**

Progress

Plan

- As the activity of global collaboration for ITN, the collaborative R&D (KEK, KU, and KAT) of 1.3 GHz single-cell cavity has been started in Feb 2024.
- KEK supplied the Nb and NbTi raw materials to KU/KAT, and two 1.3 GHz single-cell cavities have been fabricated successfully in Aug 2024.
- We have continued the regular technical meeting for checking the progress and technical issues.
- The 1.3 GHz single-cell cavities have been shipped to Japan successfully. The surface treatments and vertical test of cavities will be conducted by KEK with participating KU and KAT people.
- \* ITN: ILC (International Linear Collider) Technology Network

<sup>\*</sup> KU: Korea University
